

LE SCHOENENBOURG

RESTAURANT SEQUOIA

Clef Verte

ECOGESTURES TO FOLLOW

- **Room temperature management:** We limit room temperatures to 22 degrees for both heating and air conditioning. This reduces energy consumption and greenhouse gas emissions by 10-25%. In hot weather, we invite you to close curtains and shutters to limit the use of air conditioning.
- **Switching off electrical appliances:** Remember to switch off lamps, coffee makers, televisions and other electrical appliances after use. Even on standby, these appliances consume energy - up to 70% of their total consumption. Your gesture contributes to our collective effort.
- **Sensor-equipped windows:** Our windows are equipped with sensors that stop the heating and air conditioning when they are open, to avoid wasting energy. Please do not use the air conditioning when the terrace is open.
- **Reduce towel washing frequency:** You can request not to change your towels daily, which reduces laundry-related pollution and protects textile fibers. Similarly, you can choose not to have your room cleaned daily.
- **Waste sorting :**
 - Returnable glass: Don't take glass bottles with you - they are returnable.
 - Paper, cans, glass bottles: Use the waste garbage can.
 - Other waste: Use the bathroom garbage can.
 - Used batteries: A basket is available at reception to dispose of them

- **Packaging waste reduction:** Hospitality products have been removed from rooms. Sorting garbage cans are available at reception (3x18L for cardboard/glass, other waste).
- **Waste collection and sorting:** We sort and collect all waste and take it to the waste collection center: bio-waste, cardboard, plastic, glass, wood, metals.
- **Deposit on minibar bottles:** Glass bottles in the minibar are deposited with the producers and sellers. Please do not take them away.
- **Elevator use:** Use the elevator to reduce the use of stairs.
- **Reducing car travel:** Opt for public transport (timetables available at reception), cycling or walking.
